

# ELG Series Electric Logs

An electric logset with realistic flames! Just set the ELG logset in your fireplace, plug it in, and you're ready to enjoy. The beautiful dancing flames light up the firebox just like a real wood fire. Use with the optional heater to warm a chilly room. The ELG logset requires no gas hook-up, making it ideal for apartments, condos, offices, and mobile homes.

## The Innohearth Difference

Innohearth's log sets feature the most realistic electric flames on the market. Unlike other electric fireplaces, our units provide a warm, clean, and beautiful look regardless of whether the unit is on or off. This is because we do not use two-way mirrors or dark reflective screens to provide its flame effect.

When the unit is on, lively dancing flame strips reflect the soft light of the logset, creating not only realistic wood-burning-like flames, but illuminating the firebox. This animated play of light and shadow on the firebox walls adds to the realism of the experience.

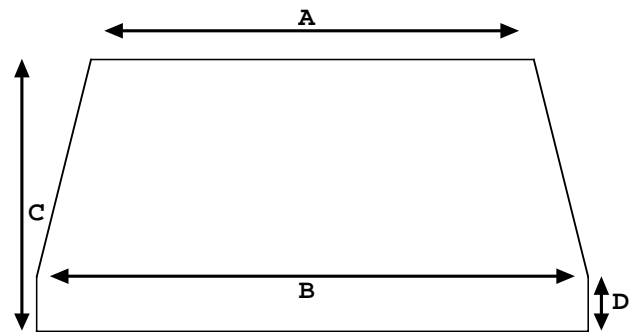

When the unit is turned off, the flames disappear, leaving a clean, fully detailed logset and firebox without the unnatural reflections from screens and mirrors.

In any lighting condition, the flames are always bright and vibrant, never dim or washed-out.

Innohearth logs naturally imitate the relaxing pop and crackle of a real wood fire.

## ELG Series Features

- 5,000 BTU/hr electric heater optional
- Beautiful glowing ember bed
- Richly detailed logs
- Optional remote available
- Virtually no installation costs - set in any fireplace or stove
- Inexpensive to operate
- Completely emission-free
- Completely portable - just unplug it and move it to a new room or a new dwelling
