# GET THE LOOK, WITHOUT THE HASSLE AND EXPENSE OF A WOOD BURNING FIREPLACE!

In this day of energy and environmental concerns effecting wood burning appliances around the country, the timing couldn't be better for electric products that make sense.

Innohearth has a complete line of electric fireplace products that provide 3 simple electric product choices:

- Electric log set (with optional heater)
- Electric fireplace, log set and heater
- Electric slimline fireplace, log set, heater, custom oak mantel and surround

Each Innohearth brand electric log set has a built in *Electricflame* unit that generates a realistic flickering flame, and it illuminates the fireplace with a warm glow.

This animated play of light and shadow on the fireplace, compliments Innohearth's natural looking seasoned oak logs, and completes the look of a real fire.

Innohearth uses 5 spectacular looking seasoned logs that look just like the real thing. *They are the most realistic looking electric logs on the market*, and are made of light weight, durable urethane.

If you need to warm a chilly room, with the flip of a switch you can activate the electric heater (optional with log set). It comes with a blower that circulates the hot air.

Natural looking Innohearth logs packaged with the *Electricflame* unit give you a combination that's attractive, functional, environmentally friendly, and energy efficient, and costs pennies per day to use.

**IT LOOKS REAL... BUT IT'S ELECTRIC,  
AN INNOHEARTH ELECTRIC!**

*Innohearth Electric Slimline Fireplace ESF-G*

Innohearth's electric hearth products incorporate design features that make sense:

## INNOHEARTH'S *Electricflame* TECHNOLOGY:

- Creates the illusion of a real flickering fire... complete with crackling sound
- Causes the flame light to dance on the firebrick
- Generates a large glowing ember bed
- Has an easily accessible on and off switch

## INNOHEARTH ELECTRIC LOG SET:

- Simple assembly - no installation costs
- Just plug it in - fits any standard 110 outlet
- Used in home, condo, townhome or manufactured home
- Logs are richly detailed, and were created from actual seasoned oak patterns
- Can be moved to other fireplaces with similar dimensions
- Comes in 3 popular sizes: 18", 24" and 30"
- Electric - means no emissions
- Includes 5 full size logs, *Electricflame unit*, log grate, and ember bed
- Optional: heater, and remote control available
- Design certified by Omni Test Labs

## OPTIONAL ELECTRIC HEATER:

- Approximately 5000 BTU/hr - 1400 watts and includes quiet air circulating blower
- 100% efficient - all heat generated circulates in the room
- Separate on and off switches - flame and heat operate independently
- Economical - costs approximately 7 cents per hour of use

You get elegance and realism, in an energy efficient, easy to install package, that has the look of a real log fire, but only you know it's electric... a Sierra electric log set.
